A Powerfully Engineered Automobile...20 years in the building.

- The Callaway Corvette is a specialist version of the C6 Corvette, built by Callaway Cars Inc. and sold through selected Callaway/Chevrolet Retailers
- They are professionally engineered, seriously fast and an unbeatable value. They are also fully warranted and emission compliant in all states.
- New cars may be ordered through, and are serviced by, trained and authorized [Callaway Corvette Retailers](#) nationwide.
- Super high performance is now available in either platform: Convertible or Coupe. 6 speed manual or 6 speed paddle-shift automatic transmission.
- Thinking of a Z06 or ZR1? Consider a test drive in the Callaway Corvette at your Callaway Retailer:
- The performance of the Callaway Corvette is within two tenths of the ZR1 in the quarter mile and costs substantially less.
- The Callaway Corvette is approximately the same price as a Z06. However, it is faster and more exclusive.
- The Callaway Corvette is available as an automatic and a convertible.
- For those seeking an even more exclusive automobile, see the [Callaway C16](#). Versions of the C16 start at 650 hp and range to 700 bhp.
- The Callaway Corvette is here now. Call the Callaway Headquarters, 860 434 9002 in Connecticut or 951 279 0400 in California. Speak to a Callaway Corvette specialist.

(2005-2007 6.0 liter LS2 produces 560 bhp)

The Callaway Corvette is powered by GM's remarkable 6.2L LS3 engine, enhanced by Callaway's Eaton/Magna Charger supercharger system. The Roots-type supercharger provides substantial power increase over the stock Corvette's 430 bhp, while supercharger internals manufactured by Eaton, the world's leading OEM supercharger supplier, ensure bulletproof reliability. Callaway's electronic engine management calibration provides perfect street manners, eliminating engine-damaging detonation and maintaining excellent fuel economy and 50-state emission compliance (CARB E.O. D-488-14). Magnuson's unique intercooler design, built into the intake manifold base (patent pending), lowers charge air temperature up to 100F to increase power. During low-load cruising conditions, the supercharger's internal bypass allows the rotors to spin freely, reducing parasitic drag to less than one-third of one horsepower.

Polished CS2000 Supercharger Standard for 2009

- The Callaway packages represent 20 years of selecting, developing and manufacturing a highly specialized set of components for Corvette platforms.
- Callaway was hired by GM starting in 1985 to produce the Callaway Twin Turbo Corvette, Regular Production Option B2K. 500 cars were produced
- We have come to appreciate what works, what doesn't; what's a liability down the road, and what gives lasting satisfaction.
- That knowledge is condensed into a series of coordinated modifications, manufactured to precise specifications, and offered to the enthusiast in packages that treat the automobile as a well-tuned, systems-engineered entity.
- That is how we make Powerfully Engineered Automobiles.
- Below are listed Option Packages for the Callaway Corvette.

OPTIONAL EQUIPMENT:

Callaway Le Mans Brake Package

Callaway 6-piston front and 4-piston rear calipers with 355 x 32 mm rotors, front & rear (for OEM RPO QG7& Q9V wheels)
 Callaway 6-piston front and 4-piston rear calipers with 380 x 32 mm rotors, front, and 355 x 32 mm, rear (for Callaway C-Mg Wheels)

Extreme performance needs extreme braking ability. In keeping with enviable acceleration and top speed, braking ability is massively enhanced with the same package that the Callaway cars use at Le Mans, Spa, Monza, Silverstone, and Brno. Only the brake pad material spec differs for road use.

Callaway/Eibach Multi-Pro Suspension Package

Callaway/Eibach Multi-Pro coil-over suspension with double adjustable machined aluminum dampers, external reservoirs with 10-position compression and rebound control; companion helper and tender springs supplementing composite leaf springs; front and rear Callaway anti-roll bars, tubular steel.

Callaway and Eibach have jointly developed the ultimate suspension upgrade for the C5/C6 platform. Our objective was as follows: Give the driver a tool to transform the ride of the automobile to his/her taste. The elements that are now adjustable with the Callaway/Eibach system are: ride height, pitch attitude, cross-weighting of the entire car, and damping rate in both rebound and compression. With this adjustability we look to satisfy the driver who will tailor his ride and handling to their local conditions whether that be road or track, high speed or around town, autocross or cross country. We have good starting point suggestions for each of those uses. Once in place, you are encouraged to experiment. (components shown without swaybars and links, which are included)

Wheel & Tire Packages

19/20 Callaway/Dymag C-Mg Wheels

Front: 19" x 9.5" Callaway/Dymag forged magnesium spider w/carbon fiber rims, with 285/30ZR19 Michelin PS2 tires

Rear: 20" x 11.0" Callaway/Dymag forged magnesium spider w/carbon fiber rims, 305/25ZR20 Michelin PS2 tires

The Dymag CarbonMag Wheels are a remarkable piece of technology. A full carbon fiber rim joined mechanically to a forged magnesium spider makes this combination the lightest road wheels available. e.g. 20" diameter x 11" wide weighs 18.6 lbs. This unsprung weight is approximately 60% of the equivalent aluminum wheel. Accommodates tire pressure warning system transmitter .
