Safety

Infiniti Advanced Air Bag System (AABS). Dual-stage front supplemental air bags with seat belt and occupant-classification sensors adjust their inflation rate depending on crash severity and seat belt usage. If the front-passenger's seat is empty, a sensor will deactivate the air bag[*].	•	•
Side-impact supplemental air bags. These air bags are placed in the front seat bolsters so they can move with the seat to help maintain optimal positioning.[*]	•	•
Roof-mounted curtain side-impact air bags. Deploy from the headliner above the side windows, helping to give outboard occupants in all three rows enhanced head protection in the case of a side impact or rollover. Tied to the vehicle's rollover and side-impact sensors, they are designed to offer added protection by staying-inflated for an extended time.[*]	•	•
Rollover Sensor. The QX is equipped with a sensor that can help detect an impending rollover. If one is deemed imminent, the system deploys the side-curtain air bags to help provide enhanced occupant protection.	•	•
Active Head Restraints (AHR). In certain rear-end collisions, front-seat Active Head Restraints move upward and forward to help cushion the head, and to help assist in reducing whiplash-type injuries.	•	•
Seat Belt Pretensioners. Help tighten the front seat belts in certain frontal collisions, while load limiters are designed to "give" a little, helping reduce belt-force load transmitted to front occupants. All rear-seat passengers, including those in the center, are secured by 3-point seat belts.	•	•
Snug Kids. The first venture of its kind, Snug Kids is our online guide to selecting and correctly installing a child restraint seat for your Infiniti automobile. Our safety engineers evaluated numerous child restraint seats, installing them in every Infiniti car and SUV. Visit InfinitiUSA.com/snugkids to view or download the results and recommendations.  Download the Snug Kids™ Safety Seat Fit Guide. (83 Kbs)  Download the Snug Kids™ Safety Seat Fit Guide in Spanish.	•	•
<u>3-point height-adjustable front seat belts with pretensioners and load limiters, driver's seat Emergency Locking Retractor (ELR) and passenger's seat ELR and Automatic Locking Retractor (ALR)</u>	•	•
Second-row 3-point height-adjustable seat belts with ELR and ALR (3-point center position seat belt available with split bench seat option)	•	•

Third-row 3-point seat belts with ELR and ALR	•	•
<u>LATCH System (Lower Anchors and Tethers for CHildren)</u> helps simplify proper installation of compatible child restraint seats	•	•
Zone Body Construction. The QX features Zone Body construction with front and rear crumple zones and steel side-door guard beams. A reinforced steel-ribbed structure helps maintain the integrity of the passenger compartment, while front and rear crumple zones help absorb and redirect crash energy.	•	•
<u>4-Wheel Anti-lock Braking System (ABS)</u> . The Infiniti EX's 4-wheel, 4-channel ABS helps you maintain control by helping to prevent wheel lockup.	•	•
<u>Brake Assist (BA)</u> . In emergency braking situations, many drivers don't brake hard enough, soon enough. Brake Assist monitors how you apply the brakes and, sensing emergency braking, applies maximum brake force.	•	•
Brake Assist with Preview Braking.[*] This available system uses the QX's Intelligent Cruise Control[*] sensors to monitor vehicles ahead. If it senses rapidly closing distances to vehicles in the same lane, it automatically pre-pressurizes the braking system in anticipation of emergency braking, potentially improving the braking system's response to sudden driver input.	•	•
<u>Electronic Brake force Distribution (EBD)</u> . To help optimize braking performance for a variety of vehicle loads, EBD adjusts the amount of brake force applied to the front and rear wheels for improved braking performance, reduced front-end "dive" during braking and more even brake wear.	•	•
<u>Traction Control System (TCS)</u> . To help enhance rear-wheel grip when accelerating, the Infiniti EX's Traction Control System senses wheelspin and automatically reduces engine output and/or brakes the spinning wheel to help improve traction. 	•	•
<u>Vehicle Dynamic Control (VDC)</u> . Acting in tandem with the Traction Control System, VDC compares actual vehicle cornering performance to the driver's input, adjusting power levels and applying appropriate brake pressure to individual wheels to help correct oversteer or understeer, helping keep the vehicle on the steered path[*]. 	•	•
Tire Pressure Monitoring System (TPMS) provides specific information for each tire and low pressure warning.[*]	•	•
Security		
Infiniti Vehicle Immobilizer System embeds an encoded transponder chip into ignition key. The engine control computer will not allow the engine to start without the correct key and transponder.	•	•
<u>Vehicle Security System</u> sounds alarm if intrusion is detected.	•	•
