## VANQUISH

Aston Martin's new Vanquish, positioned proudly at the pinnacle of the luxury car-maker's series production sports car lineup, makes its U.S. debut today. This breathtaking new super grand tourer represents the zenith of current Aston Martin design and engineering, and points to an exciting and confident future for the historic brand.

Inspired by the extraordinary One-77 supercar, Vanquish is cloaked in a suit of carbon fiber. Its muscled body has an aura of intense athleticism and measured aggression. Shaped using advanced Computer-Aided Engineering, Vanquish embodies a seamless fusion of assertive style, intriguing details and highly effective aerodynamics.

The heart of this Vanquish—its new generation 6.0 liter V12 engine—beats harder than ever, delivering a scintillating 565 bhp and 457 lb-ft of torque. Crucially, too, the iconic V12 has been tuned specifically to deliver greater torque low down the rev range to make the car feel even more willing and muscular from very low revs. The new V12 engine and

its newly tuned six-speed automatic gearbox provide effortless, accessible performance with a roaring soundtrack to match.

Brutal yet beautiful, ferocious yet docile, agile yet stable. Such is the Vanquish's breadth of performance and depth of ability. It is an Aston Martin like never before. First deliveries are expected in early 2013.
