CONTINENTAL GT SPEED

Bentley is introducing a new performance flagship, its fastest production model ever, the Continental GT Speed coupe. The 205-mph GT Speed will appeal to driving enthusiasts who place a high value on outright performance, agile handling, distinctive design and sporting luxury.

At the heart of the new Continental GT Speed is an uprated version of Bentley's legendary 6-litre, 48-valve, four-cam, twin turbo-charged W12 engine. For the new model, the W12 develops 616 bhp at 6,000 rev/min and 590 lb-ft of torque to deliver thunderous, supercar performance with effortless overtaking capability. The zero-to-60-mph sprint is dispatched in a mere 4.0 seconds, and the car has a top speed of 205 mph. The new Speed's immense power is transmitted via a state-of-the-art close-ratio, ZF eight-speed automatic transmission that delivers quick yet imperceptible gear changes through intelligent adaptive control software to ensure the perfect combination of speed and refinement. The new gearbox also makes a significant contribution to an overall 12 percent improvement in fuel economy and CO₂ emissions.

Channelling the extreme performance of the GT Speed, the chassis is tuned for uprated steering and suspension systems and a lowered ride height. The chassis is complemented by 21-inch Speed wheels, available in two lustrous finishes, and fitted with 275 35 R21 Pirelli PZero ultrahigh-performance tires. The result is a sportier and more engaging Bentley driving experience with tauter handling and improved agility.
