## FISKER SURF

The Fisker Surf concept vehicle is the world's first electric luxury/sports automobile for an active and eco-friendly lifestyle.

The Fisker Surf builds on the success of the groundbreaking Karma Electric Vehicle with extended range (EVer) by adding additional, flexible load-carrying capability, along with a spirited new attitude all its own. The Fisker Surf takes full advantage of the advanced, high-efficiency powertrain and the innovative space frame architecture of the Karma sedan on which it is based.

The Karma and Surf use a series-hybrid drive system in which the car is powered only by electrical energy. The onboard gasoline engine drives only a generator to supplement the high-voltage battery's power. The Fisker Surf combines performance, luxury, style, utility and economy with an enduring concern for the sustainable use of resources and a respect for our natural environment.

"With the Surf, Fisker has created a unique cross between a luxury sports car and a station wagon," said Henrik Fisker, Fisker Automotive's cofounder, Executive Chairman and Executive Design Director. "The Surf is a first-of-its-kind eco-friendly lifestyle vehicle that offers space, performance and luxury design for people who live an active, environmentally conscious lifestyle and love to drive beautiful cars."
