

VIPER GTS LAUNCH EDITION

The elite artisans in Detroit's storied Conner Avenue Assembly plant are hard at work hand-building two new models of the latest generation of Viper, which will now serve as the flagship vehicle of the SRT brand. For 2013, SRT Viper and SRT Viper GTS offer significant improvements, incorporating premium materials and functional details inside and out.

SRT Viper GTS builds on Viper's impressive DNA, carrying a confidence that's been earned at racecourses the world over. Beyond Viper's significantly improved 640 hp, V10 engine, GTS features a two-mode active suspension, a space frame that increases torsional rigidity by 50 percent and extensive use of carbon fiber, aluminum and magnesium for Viper's best power-to-weight ratio ever.

The interior of the Viper GTS introduces a new level of craftsmanship. All surfaces are fully leather skinned, sewn and wrapped

with extra padding. Brand new color accents appear on seats, doors, center console and stitching. Drivers are treated to race-inspired seats developed by Sabelt, the renowned Italian race car interior supplier. These seats offer extra support for Viper's extreme acceleration capabilities.

With its premium materials, craftsmanship and engineering, the 2013 Viper GTS is on par with the world's finest performance vehicles.
